

Helping You UT INSPECTIONS for Your Safety

VES
ROBOTIC APPLICATIONS

ABOUT US

VES develops aerial robotic services and projects to improve the functionality, reliability and safety of unmanned aerial systems for industrial applications.

Our staff is specialized in the development and application of drones for inspection and maintenance tasks of industrial plants and civil infrastructures, including contact inspection (ultrasonic and eddy current) by means of aerial manipulation. Moreover, our team has a wide experience providing industrial inspection services with drones (from acquiring data to complete inspection reports). Finally, VES is a recognized UAS operator in Spain and counts with all the permits and certifications to perform complete industrial inspections.

OUR SERVICES

Storage TK Inspections

VES applies technical solutions for storage tank inspections using specific NDT equipment, reducing human risk and budget.

UT Measurements

Using robotics, we can remotely obtain thickness measurements of tank enclosures.

Inspection Reports

Both the execution of the work and the reporting of the results are supported by professionals in each sector.

WHY CHOOSE US

Our drones makes inspections cheaper, faster and with less labour accidents.

01 No accidents due to height

By using drones, you don't need to send operators to work at height. Instead, send our drone!

02 10X faster

Building scaffolds, securing ropes... That's stoneage! Just turn on our drone and start taking measurements.

03 25% bill reduction

Isn't it enough? By working faster you can save your and your client's time, making the process cheaper!
