Drivers of the AI in Radiology Value Cycle
contextflow transforms unstructured medical data into a powerful knowledge base from which we develop our AI solutions.

Our solutions provide real clinical value to radiologists, which then further incentivizes hospitals to continue sharing this underutilized data.

Clinical Data

Unique clinical value incentivizes continued data sharing

Unstructured clinical data is transformed into a valuable knowledge base

Clinical Value

SEARCH Lung CT

Knowledge Base

AI solutions integrated into workflow provide clinical value

Our large scale and high quality knowledge base powers the development of AI solutions

contextflow

image search engine + worklist triaging for radiologists

contextflow.com

Who We Are

Transparent. Creative. Motivated.

contextflow is a spinoff of the Medical University of Vienna (MUW), supported by the Technical University of Vienna (TU). Founded in 2016 by a team of AI & engineering experts, we develop next-gen, deep learning-based tools to improve radiology workflows.

What We Do

Facing increasing workloads, radiologist shortages and increasing complexity in diagnosis, radiology departments are facing delays, missed findings and high overtime expenses.

contextflow's software helps diagnose difficult cases...fast, saving time and resources.

Vision

Effective future treatment decisions will be driven by comparing a patient to others for whom we have evidence of treatment, response & outcome.
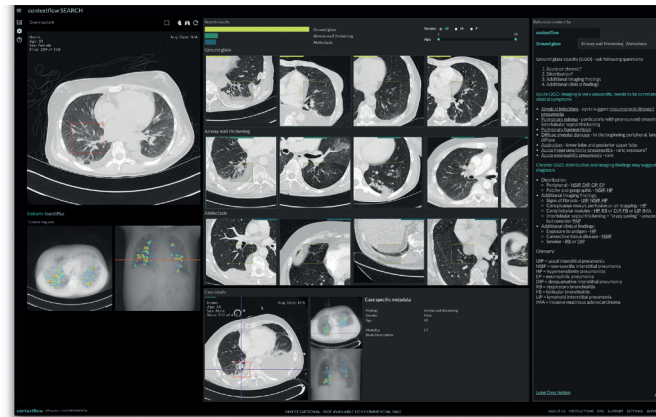

contextflow's AI tools empower radiologists to make this possible.

Covering wide
disease ranges

Tell me about my
patient's future

Using comprehensive
patient trajectories

Solutions

SEARCH ⓒ

Identifies & matches relevant, visually-similar disease patterns to aid in diagnosis

– 3D image-based search engine
– 19+ patterns in lung CTs
– Shows similar cases, statistics & reference information
– Spend less time diagnosing difficult cases
– Integrates directly into PACS
– CE marked

TRIAGE

Helps you prioritize time-critical patients

– Integrates directly into RIS
– Worklist triaging based on 3D anomaly detection
– Customizable prioritization
– Identify time-critical patients
