Defining Health, Fitness & Longevity

98% of Surgeries Depend on Questionnaires for Pre & Post Surgery Assessments

Non-quantifiable data is costly to patients and
the healthcare system:

15%

Health complications

5-15%

Readmitted

€2.14B

Hospital readmission
costs

Quantifiable pre & post perioperative care can protect a
patient's health, and mitigate a hospital's costs and risks.

What is the “Golden-Standard Biomarker” that defines Health and Performance?

Cardiorespiratory Fitness (CRF)/VO2 max

*“The maximum rate of oxygen consumption
attainable during physical exertion”*

CRF is the best Quantitative Predictor of All-Cause Mortality and Cardiovascular events in Healthy Men and Women (Kodama, JAMA, 2009).

CRF assessments provide quantifiable data that can be tailored to support: Longevity | Performance | Strength | Endurance | Nutrition & Overall fitness for any individual.

Validated SaaS Platform

Splendo Health is a validated SaaS platform that leverages select wearable tech to make Cardiorespiratory Fitness/VO2 max assessments affordable & accessible.

Heart

Lungs

Muscle

Validation study under peer-review:

Molinger, Fudim, Wischmeyer, et al. (2023), 'Feasibility of a Novel Augmented 6-Minute Incremental Step Test: a Simplified Cardiorespiratory Fitness Assessment Tool', *JACC Heart Failure*

Splendo Health Assessments

Two proven and effective protocols for simple and scalable CRF/VO2 max assessments

Six-Minute Incremental Step Test
(6MIST)

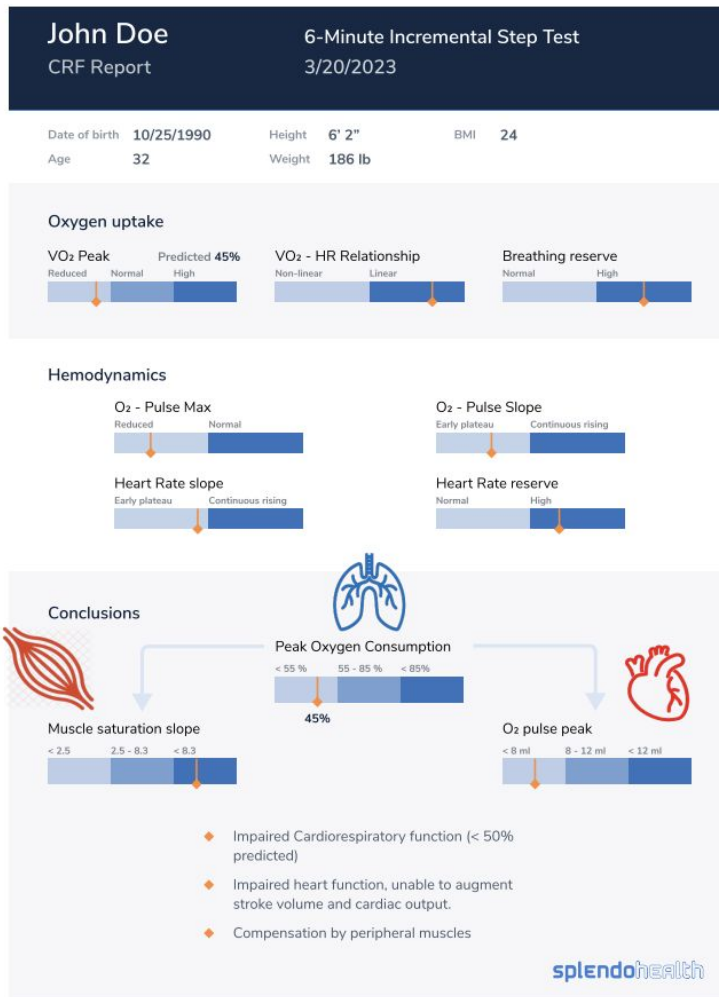

One-Minute All Out Airbike Test
(1MAO)

Competitive Advantage

Splendo Health will create the world's largest CRF dataset by translating physiological strengths & limitations of an individual's heart, lungs & muscle. Data that drives actionable metrics for:

- Clinical risk stratification
- Longevity
- Lifestyle optimisation
- Performance optimisation
