

Tilamur has been recognized for several innovations, including our aquaponic system (acknowledged by the President of Murcia Region in 2019) and our smart greenhouse solutions. We participate in EU projects like PestNu (Horizon 2020) and Easy-Feed (EMFF), developing sustainable solutions for agriculture and aquaculture.

Our smart greenhouse innovation reduces water consumption by 30-50%, decreases chemical fertilizer use by over 40%, and minimizes or eliminates pesticide use, while increasing productivity and resilience to climate challenges.

We offer training programs in sustainable techniques and have international experience, with knowledge transfer activities in Mauritania and other regions. Our Instagram profile (@tilamur.pymeinnovadora) showcases our innovations and activities.

We are particularly interested in collaborations to scale our smart greenhouse solutions to different contexts and integrate them with other sustainable food production systems.
