## Logistics

Given the fast-moving nature of the supply chain, improved performance is essential for organizations to trade smoothly across regional and international borders.

At Enide we solve challenges based on our advanced knowledge of data and technology. Strong collaboration with all partners in the supply chain drives our success. Working with SMEs, multinationals, universities and research institutes, we help companies manage the flow of goods, predict demand and ensure the early detection of incidents and opportunities.

### Our expertise

Thanks to our solid technology background as well as our understanding of the key challenges in the sector, we have the expertise needed to help you improve management and operations in logistics.

# What we do?

Enide offers consulting services and IT solutions in the areas of personal mobility and logistics. Through innovation based on deep customer insights, we help you to solve some of your most urgent business challenges.

The world never stops moving. Organizations face constant pressure to deliver efficiency, improve customer experience and simultaneously address global issues like sustainability and climate change.

With technology evolving at high speed, you want to keep innovating to stay up to date and meet your customers' needs. At Enide, we have a holistic view and can help you tackle these issues with great success.

## Automotive

Electric vehicles have arrived. The debate has shifted away from when to go electric: it's now about how to do so in the most energy-efficient, safe, economic and driver-friendly way.

In parallel, connected vehicles are the next step towards smart vehicles, integrating apps and services in vehicles in the same way as in our phones. A completely seamless experience.

### Our expertise

We're actively involved in the deployment of connected and/or electric vehicles, collaborating with all stakeholders in the sector: car manufacturers, technology providers, energy companies, drivers' associations and public authorities.

Passionate about innovation in this field, at Enide we work with connected and electric vehicles, as well as the supporting infrastructure and the socioeconomic context in which cities and regions can facilitate the mass acceptance of this exciting technology.

## Mobility

### Personal mobility

Accommodating people's mobility needs is an ongoing challenge for our cities, regions and beyond. At Enide, we are your ideal partner to develop quality solutions across all transport modes. We make a positive difference to people's mobility, within cities and beyond, by developing solutions that are smart, safe and sustainable.

### City mobility

Our capabilities cover the design, planning and building of solutions to facilitate integration between transport modes in urban areas. We also specialize in demand management and integration with energy infrastructure, using innovative technologies.

### Our expertise

Over the years, we have managed and participated in several mobility projects at European level, using our consulting expertise to bring quality innovations to market.
